
Mark III Mobile Nose – A Stereo Electronic Nose for a Mobile Inspection Robot

Achim Lilienthal, Tom Duckett

University of Tübingen, WSI / Örebro University, AASS

Contents

- 1) Introduction
- 2) Set-Up of the Mark III Mobile Nose
- 3) Dynamic Response Experiment
- 4) Sensor Model
- 5) Evaluation
- 6) Results
- 7) Conclusions
- 8) Applications

1) Introduction

■ Mobile Nose

- cover larger scale environments
- electronic watchman with smelling ability, ...
- use in rescue robots
- detection
- **localisation**
- identification

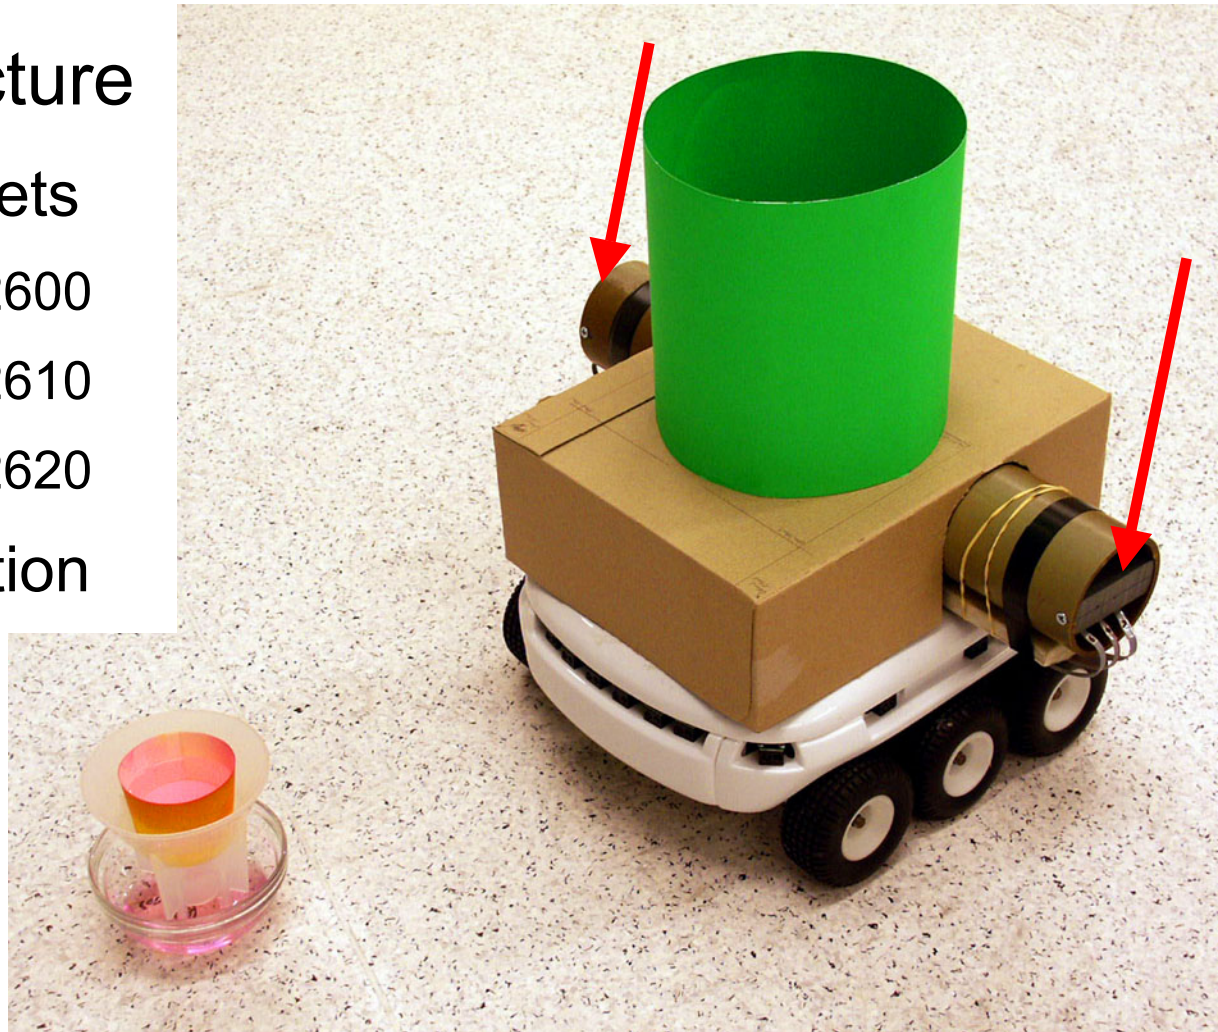

2) Set-Up of the Mark III Mobile Nose

- metal oxide gas sensors
 - doped semiconducting surface layer
 - heating element
- pros and cons
 - high sensitivity
 - inexpensive
 - low selectivity
 - long recovery

2) Set-Up of the of the Mark III Mobile Nose

- stereo architecture
 - 2 equivalent sets
 - | Figaro TGS 2600
 - | Figaro TGS 2610
 - | Figaro TGS 2620
 - 40 cm separation

2) Set-Up of the of the Mark III Mobile Nose

- use of suction fans
 - Papst 405F (8 m³/h)
 - sensors behind a covering bar

2) Set-Up of the of the Mark III Mobile Nose

- use of a "septum"
 - fans directed against each other
 - decrease the rate of air exchange

3) Dynamic Response Experiment

- dynamic response of the mobile nose
- step stimulus by opening a bottle

3) Dynamic Response Experiment

- dynamic response of the mobile nose
- step stimulus by opening a bottle

wait for 20s

3) Dynamic Response Experiment

- dynamic response of the mobile nose
- step stimulus by opening a bottle

open the bottle for 10 s

3) Dynamic Response Experiment

- dynamic response of the mobile nose
- step stimulus by opening a bottle

wait for 120s

3) Dynamic Response Experiment

- dynamic response of the mobile nose
- step stimulus by opening a bottle

repeat on other side

4) Sensor Model

- assume first-order sensor model
- exponential rise and decay

4) Sensor Model

- assume first-order sensor
- exponential rise and decay

5) Evaluation

- non-linear fitting: Marquardt-Levenberg
 - gnuplot implementation can be used
 - parameter values
 - asymptotic standard error

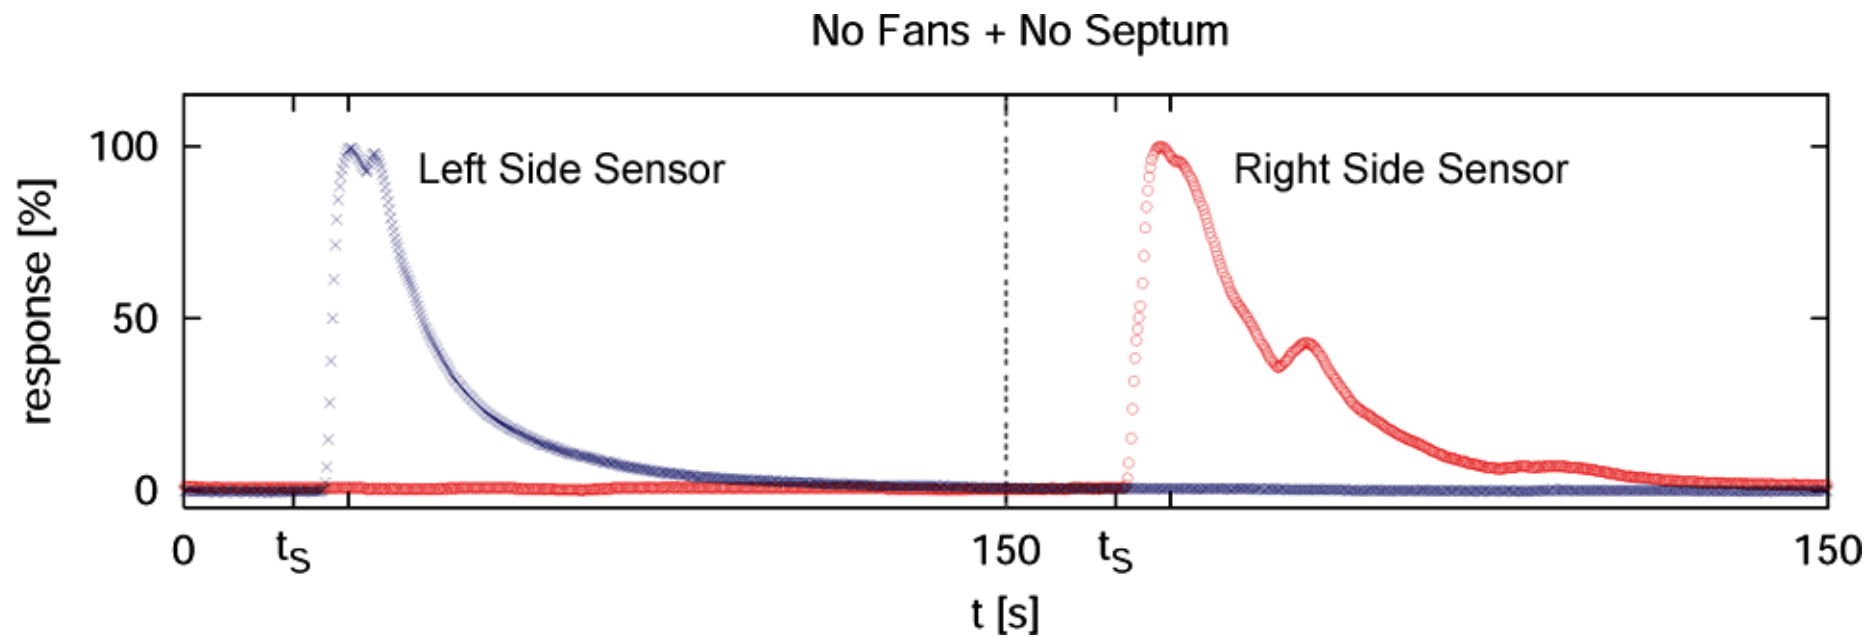

5) Evaluation

- combining individual fits
 - assuming Gaussian distribution with different σ_i
 - maximum likelihood estimator
 - weighted averaging

$$\bar{\mathbf{x}} = \frac{\sum \omega_i \mathbf{x}_i}{\sum \omega_i} \quad \omega_i = \frac{1}{\sigma_i^2}$$

$$\bar{\sigma}^2 = \frac{\sum \omega_i}{(\sum \omega_i)^2 - \sum \omega_i^2} \sum \omega_i (\mathbf{x}_i - \bar{\mathbf{x}})$$

6) Results - No Fans

■ $\tau_r \approx 1.93 \pm 1.18$ s

■ $\tau_d \approx 28.88 \pm 6.02$ s

TGS 2620, 2×6 trials

6) Results - Fans

$$\tau_r \approx 1.85 \pm 0.71 \text{ s}$$

$$\tau_d \approx 9.90 \pm 2.14 \text{ s}$$

$$\tau_r \approx 1.91 \pm 0.96 \text{ s}$$

$$\tau_d \approx 10.20 \pm 0.75 \text{ s}$$

6) Results - Fans

■ $\tau_r \approx 1.85 \pm 0.71$ s

■ $\tau_d \approx 9.90 \pm 2.14$ s

TGS 2620, 2×6 trials

6) Results - Fans and Septum

■ $\tau_r \approx 1.91 \pm 0.96$ s

■ $\tau_d \approx 9.90 \pm 2.14$ s

TGS 2620, 2×9 trials

7) Conclusions

- method to determine dyn. response parameters
 - experiment
 - evaluation
- first-order sensor model is appropriate

7) Conclusions

- design of the Mark III Mobile Nose introduced
- using fans doesn't change response time ...

$$\tau_r \approx 2 \text{ s}$$

- ... but rather speeds up recovery

$$\tau_d (\text{no fans}) \approx \text{"20 s"}$$

$$\tau_d (\text{fans}) \approx 11 \text{ s}$$

- separation of airstreams is needed

8) Applications - Turbulence

- problem of turbulence

Smyth & Moum 2001

8) Applications - Turbulence

■ instantaneous distribution

8) Applications - Gas Concentration Mapping

- mapping algorithm to combine gas sensor readings

10 min

8) Applications - Gas Concentration Mapping

- mapping algorithm to combine gas sensor readings

15 min

8) Applications - Gas Concentration Mapping

- mapping algorithm to combine gas sensor readings

30 min

8) Applications - Gas Concentration Mapping

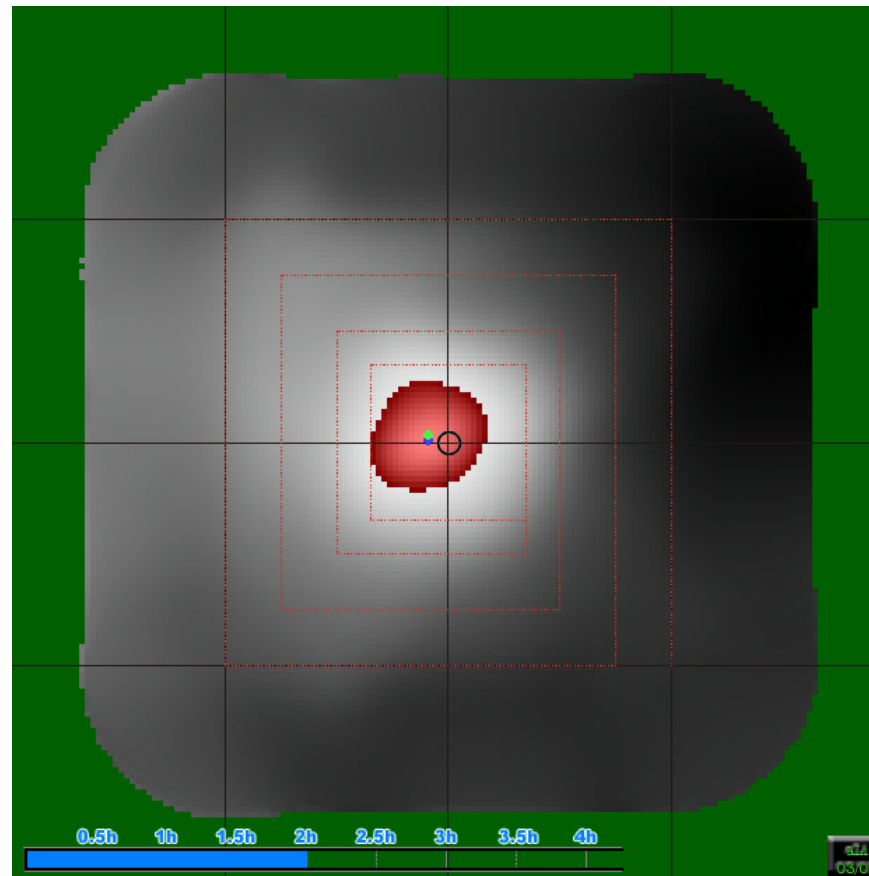

- mapping algorithm to combine gas sensor readings

60 min

8) Applications - Gas Concentration Mapping

- mapping algorithm to combine gas sensor readings

120 min

8) Applications - Gas Concentration Mapping

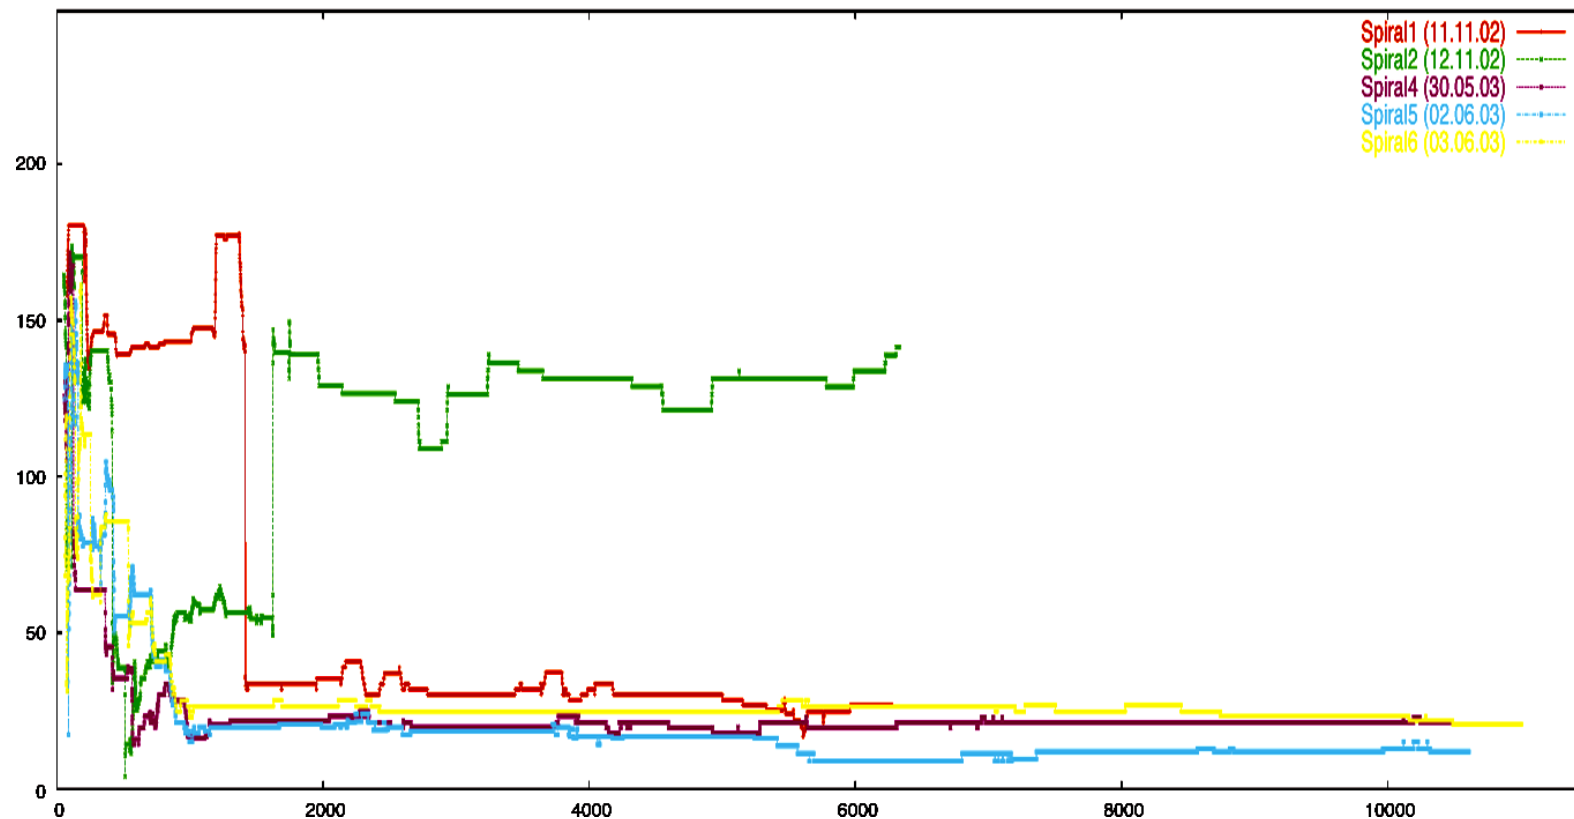

- mapping algorithm to combine gas sensor readings

178 min

8) Applications - Gas Concentration Mapping

- " av. max. concentration - source" distance

8) Applications - Gas Concentration Mapping

■ evolution

8) Applications - Reactive Gas Source Localisation - PL

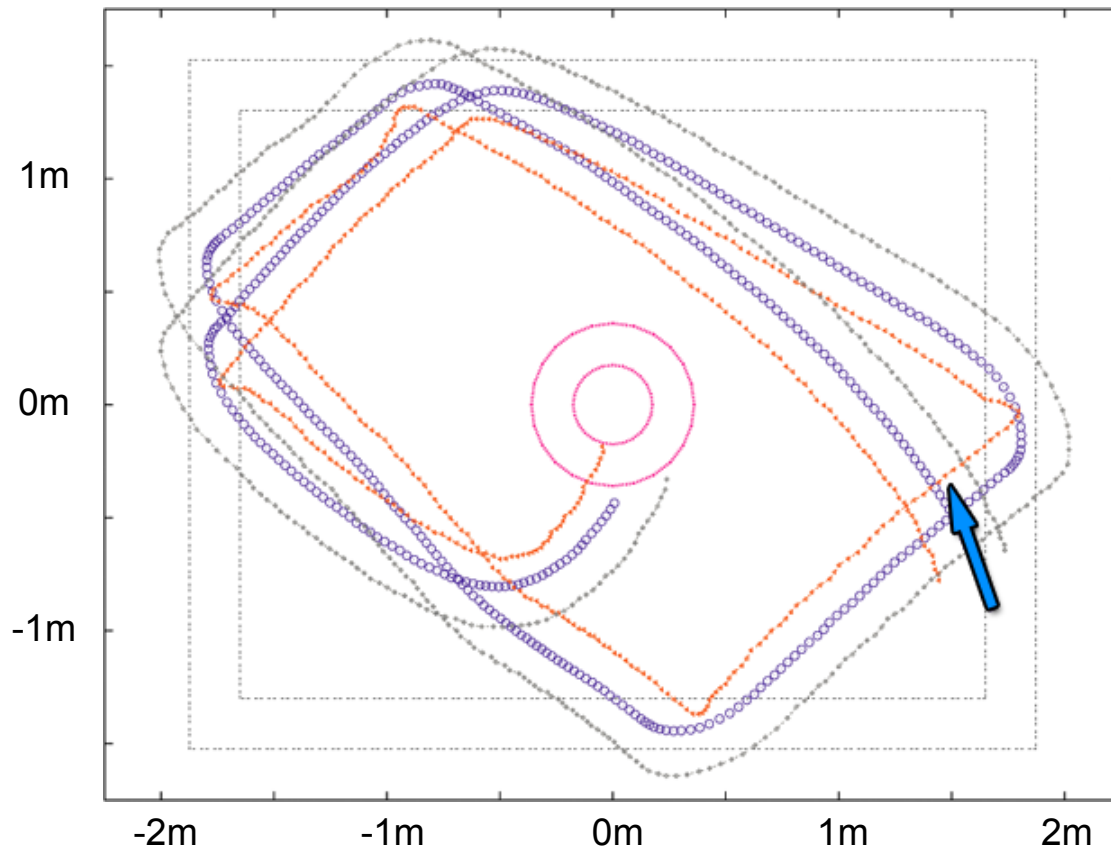

■ smelling Braitenberg vehicle

"Permanent Love"

8) Applications - Reactive Gas Source Localisation - PL

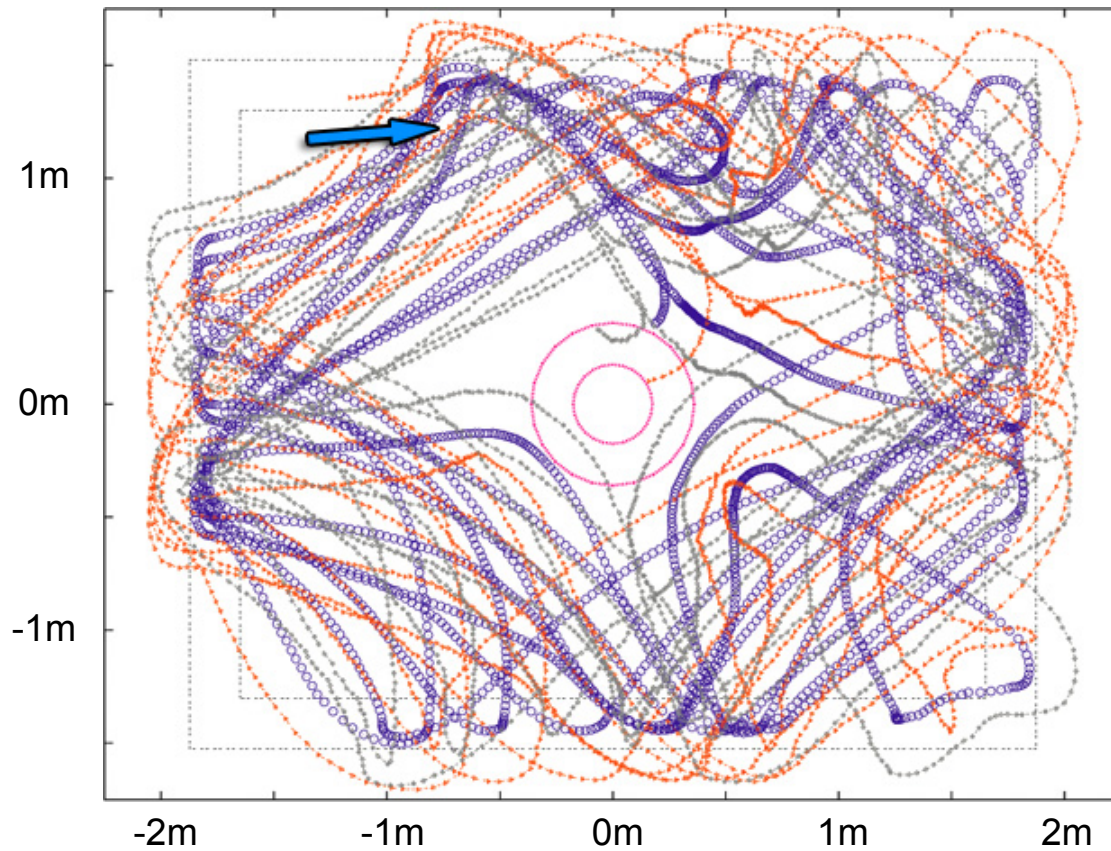

■ smelling Braitenberg vehicle

“Permanent Love”

8) Applications - Reactive Gas Source Localisation - EL

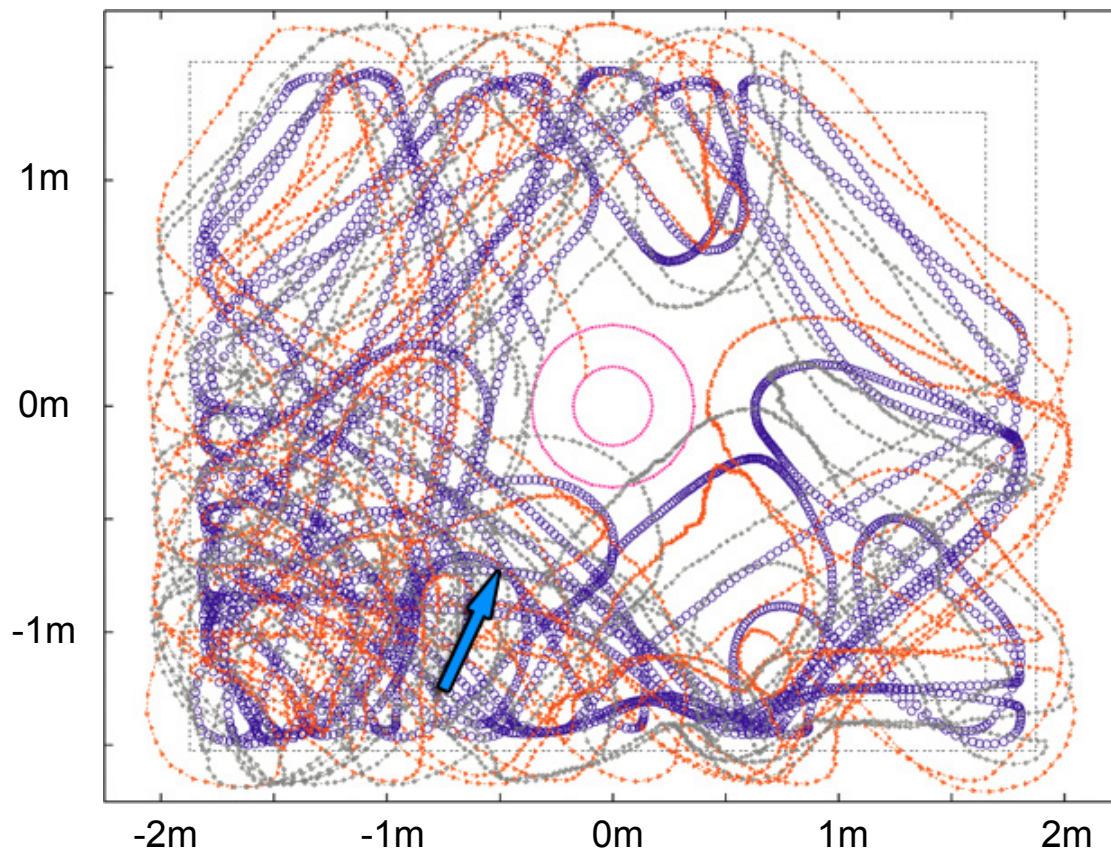

- exploration & gas concentration peak avoiding

“Exploring Love”

8) Applications - Reactive Gas Source Localisation - EL

- exploration & gas concentration peak avoiding

“Exploring Love”

8) Applications - Curvature Mapping

- curvature mapping
 - use current tangent
 - increase grid cells the robot turns away from
 - | by a fixed amount
 - | proportional to the curvature of the path

8) Applications - Curvature Mapping
